

**LISTING OF THE CLAIMS:**

While no claims have been amended, added, or canceled, this listing of the claims is presented for the convenience of the Examiner.

1. (Previously presented) A method comprising:

facilitating user entry of one or more calendar entries into a terminal, wherein the entries each include a time of an event and a user-composed calendar note describing the event;

detecting a text pattern in the one or more calendar notes;

associating the one or more calendar notes with one or more calendar profiles in a terminal on the basis of the detected text patterns, each calendar profile defining a unique view to the calendar entries;

selecting in the terminal at least one calendar profile for generating calendar content to be shared;

generating the calendar content to be shared on the basis of at least one selected calendar profile; and

establishing a connection between the terminal and at least one user terminal for transmitting or loading the calendar content to be shared to the at least one user terminal.

2-3. (Canceled)

4. (Previously presented) The method as claimed in claim 1, further comprising generating the calendar content to be shared as defined by the selected user profile based on a remote device, user group, purpose of use or time of day.

5. (Previously presented) A communications system comprising at least two user terminals, wherein a first terminal is configured:

to facilitating user entry of one or more calendar entries into a terminal, wherein the entries each include a time of an event and a user-composed calendar note describing the event;

to detect a text pattern in the one or more calendar notes;

to associate the one or more calendar notes with the one or more calendar profiles in the terminal on the basis of the detected text patterns, each calendar profile defining a unique view to the calendar entries;

to select in the terminal at least one calendar profile for generating calendar content to be shared;

to generate the calendar content to be shared on the basis of at least one selected calendar profile; and

to establish a connection between the terminal and the second user terminal to transmit or load the calendar content to be shared to the second user terminal.

6-7. (Canceled)

8. (Previously presented) The communications system as claimed in claim 5, wherein the communications system is configured to generate the calendar content to be shared as defined by the selected user profile based on a remote device, user group, purpose of use or time of day.

9. (Previously presented) The communications system as claimed in claim 5, wherein the second user terminal is a media device, computer, PDA (Personal Digital Assistant) device or mobile station.

10. (Previously presented) An apparatus comprising:

a processor; and

a memory including computer program code, the memory and the computer program code configured to, with the processor, cause the apparatus at least to:

facilitating user entry of one or more calendar entries into a terminal, wherein the entries each include a time of an event and a user-composed calendar note describing the event;

detect a text pattern in the one or more calendar notes;

associate the one or more calendar notes with the one or more calendar profiles on the basis of the detected text patterns, each calendar profile defining a unique view to the calendar entries;

select at least one calendar profile for generating calendar content to be shared;  
generate the calendar content to be shared on the basis of at least one selected calendar profile; and  
establish a connection between the apparatus and at least one user terminal to transmit or load the calendar content to be shared to the at least one user terminal.

11-12. (Canceled)

13. (Previously presented) The apparatus as claimed in claim 10, wherein the device is a mobile station, PDA (Personal Digital Assistant) device, portable computer or media device.

14. (Previously presented) A terminal, wherein the terminal comprises:

means for facilitating user entry of one or more calendar entries into a terminal, wherein the entries each include a time of an event and a user-composed calendar note describing the event;

means for detecting a text pattern in the one or more calendar notes;

means for associating the one or more calendar notes with the one or more calendar profiles in the terminal on the basis of the detected text patterns, each calendar profile defining a unique view to the calendar entries;

means for selecting in the terminal at least one calendar profile for generating calendar content to be shared;

means for generating the calendar content to be shared on the basis of at least one selected calendar profile; and

means for establishing a connection between the terminal and at least one user terminal for transmitting or loading the calendar content to be shared to the at least one user terminal.

15-17. (Canceled)

18. (Previously presented) The method of claim 1, wherein generating the calendar content to be shared on the basis of at least one selected calendar profile comprises modifying the calendar notes associated with the shared calendar content.

19. (Previously presented) The method of claim 18, wherein the calendar profile comprises a work profile, and wherein modifying the content comprises removing non-work-related personal information from the content.

20. (Previously presented) The method of claim 18, wherein modifying the calendar notes associated with the shared calendar content comprises obscuring the calendar notes associated with the shared content while retaining indicators of the times of the events associated with the obscured calendar notes.

21. (Previously presented) The method of claim 18, wherein modifying the calendar notes associated with the shared calendar content comprises providing a modified note to describe user availability in the context of both the calendar profile and on the basis of times of day associated with the calendar entries.

22. (Previously presented) The apparatus of claim 10, wherein generating the calendar content to be shared on the basis of at least one selected calendar profile comprises modifying the calendar notes associated with the shared calendar content.

23. (Previously presented) The apparatus of claim 22, wherein the calendar profile comprises a work profile, and wherein modifying the content comprises removing non-work-related personal information from the content.

24. (Previously presented) The apparatus of claim 22, wherein modifying the calendar notes associated with the shared calendar content comprises obscuring the calendar notes associated with the shared content while retaining indicators of the times of the events associated with the obscured calendar notes.

25. (Previously presented) The apparatus of claim 22, wherein modifying the calendar notes associated with the shared calendar content comprises providing a modified note to describe user availability in the context of both the calendar profile and on the basis of times of day associated with the calendar entries.
